Published mechanical measurements
104 averages in 26 processing-condition groups
Training
72 averages / 18 groups
First development
16 averages / 4 groups
Reporting development
16 averages / 4 groups
Two observed inputs only
Tensile modulus (MPa) and indentation hardness (Shore D)
Known candidate pair supplied at every stage
PLA+ vs ABS -> PLA+ vs PETG -> PLA+ vs PLA-CF
Sequential classifiers
Without replay / limited replay
Reference comparisons
Joint access to seen tasks / nearest seen response
Every decision counted: correct / wrong / nonselection / failure
Completed source-record experiment; no new physical simulation
